Bio

Junior Game Developer, passionate about creating captivating and unique games. Experienced in game systems programming, with a growing focus on building advanced, well-structured systems and a particular interest in physics programming.

Education

Digital Arts And Entertainment Major Game Development

Howest University of Applied Sciences | 2021 - 2024

TSO - IT & Networking

Burgerschool Roeselare | 2019 - 2021

Technical skills

Programming languages

C++, C#, C, CMake, SQL, Python, Matlab
Object & Data-Oriented Programming

Architecture & Practices

DOD/ECS, Dependency Injection (DI), Reflection,
Unit Testing, Test-Driven Development (TDD)

Game engines

Unity, Unreal Engine, Godot, in-house

DevOps & Tooling

CI/CD pipelines, Docker, build automation,
editor scripting, release management

Networking

Photon (Bolt, Fusion), multiplayer programming,
general networking concepts

Source control

Github, Gitlab, Git, Fork, Perforce, Azure

VR/XR Development

Cross-platform, Unity, Android

Libraries

SDL, PhysX, DirectX11, FMOD, ImGui

Microsoft

Word, Excel, .NET

Languages

Dutch - native language
English - proficient

Interests

Reading, cooking, music, PC gaming, guitar, boardgames,
travel, judo, climbing, the outdoors

Soft skills

Communication, problem-solver, adaptable, quick
learner, self-management, life-time learner, helpful

Experience

Vintecc - Digital Twin Engineer

October 2025 - September 2026

Worked within a custom Unity-based DOD/ECS architecture with a full DI system. Built a reflection-based tool that auto-generates interfaces from engineers' code, an interactive expo demo, and a full-stack client application now used in production. Provided ongoing support: bug fixes, refactoring, editor scripts, and CI/CD pipelines with Docker. Maintained several supporting services in C#, Python, and C++.

Unity, C#, .NET, DOD/ECS, DI, networking, Docker, CI/CD, reflection, Python, C++

The Pack - All-round Unity Developer

Freelance | April - May 2025

Contributed to a Unity DOTS-based game: built a custom automated daily build system, fixed bugs across the codebase, and provided gameplay feedback within a professional dev team.

Unity, C#, DOTS, CI/CD

Forklift Simulator - VR/XR Developer

August - December 2024

Developed a new UI system tailored for custom hardware and input devices, and contributed to build systems, backend functionality, and VR performance optimization.

Unity, C#, API & backend

Triangle Factory - Game systems programmer

Internship | 2024

Maintained and improved "Hyper Dash" and "Breachers," ensuring stability across VR platforms and delivering ongoing feature and stability improvements.

Unity, C#, API & backend, Photon networking
